

Proposal: OKTAI Computer and CoPlanet Website

Prepared for: Mehrdad Jaliliyan, CoPlanet AG / Prepared by: Sabin Mainali / Date: 22 September 2026

PRICE

USD 10,000

Fixed, no extra tool or platform costs

TIMELINE

2 weeks

Approval at every stage

BUILD

Custom code

React, English and German

SUPPORT

30 days

Bug fixes after launch

Note: the work sample is a quick test made to show my approach. It is not the final design.

01 Summary

I will design and build a bilingual (English and German) website for OKTAI Computer and CoPlanet. It tells one clear story: how an agentic computer turns a goal into a finished, checked result.

- **Total price:** USD 10,000, fixed, with no extra tool or platform costs. It includes the logo variations, custom OKTAI icons, motion and videos.
- **Timeline:** 2 weeks from kickoff, with your approval at every stage
- **Platform:** custom code (React), fully owned by you, with no platform subscription
- **Work sample:** <https://sabinmainali.pages.dev/preview/oktai/> (a quick test of your hero section, made to show my approach. It is a sample only, not the final design.)

I work AI-first across design, code and motion, and I personally review every output before it reaches you. This is how I deliver in 2 weeks without cutting quality. It also

mirrors what OKTAL stands for: AI does the heavy lifting, and a named person checks and signs off on the result.

02 How this proposal answers your brief

YOUR BRIEF ASKS FOR	WHERE IT IS ANSWERED
Schedule	Section 7
Total price and cost breakdown	Section 8
Technology, content editing and recurring costs	Section 4
Page and feature list	Section 5
Visual and motion assets	Section 6
Revision rounds	Section 6
Custom design or template	Section 4 (custom design, no template)
Paid fonts, plugins and services	Section 4
Collaboration, review sessions and feedback tracking	Section 9
Content revision deadline and out-of-scope changes	Section 9
Translations	Section 9
Handover, licences, domain, hosting and maintenance	Section 10
Post-delivery bug-fix support	Section 10

03 My understanding of the brief

- The site has two parts: OKTAI Computer (the main focus) and CoPlanet (the company behind it). Both should feel like one experience.
- The "computer" idea must be visible in the design, imagery and interactions.
- The story follows the product flow: command center, goal, agents at work, validation, delivered result.
- Custom OKTAI icons carry the story, step by step. They are not decoration.
- Motion should match the quality, smoothness and pacing of your references, with its own OKTAI identity rather than a copy.
- Your v19 content stays as written. Any change to wording or product claims goes to you for approval first.
- The brand direction comes from your Brand Identity: the deep blue-violet primary with its secondary palette, dark gradient backgrounds, and an expert, calm, precise tone.

04 Platform, technology and costs

Recommendation: custom code, custom design (no template)

- **Built with React components on Astro.** Astro serves the pages as fast, lightweight HTML, which is ideal for speed and SEO. React powers the interactive and animated parts.
- **Motion:** GSAP for scroll-driven animation and transitions, and Three.js (via React Three Fiber) for the 3D elements.
- **Two languages:** English and German, each with its own URLs, page titles and descriptions. The structure allows more languages later (for example French and Italian) without a redesign.
- **Content editing:** a headless CMS (Sanity) connected to the site, so your team can edit text and images in both languages without touching code. If you already use a CMS, I will build for that instead.
- **Hosting:** Cloudflare Pages, which is fast worldwide and free for commercial sites. It can also run on your own hosting.

Why custom code instead of Framer or Webflow

- **Full control over motion:** the 3D, scroll and interaction quality in your brief is not limited by a site builder's features.
- **No platform lock-in:** you own all the code and can host it anywhere.
- **No monthly platform fees:** no site-builder plan and no paid add-on per extra language.
- **Speed and SEO:** fast pages by default, with clean markup and SEO settings for every language.

Recurring costs

- Your domain, which you already have
- Hosting and CMS run on free plans for a site of this size.

Paid fonts, plugins and services

- None. Every library used is free and open source.
- Fonts will be free fonts. The final choice is agreed with you during the design stage (your Brand Identity uses Poppins, which is free).

05 Pages and features

OKTAI Computer (main section)

- Hero with intro animation, and the "Open OKTAI Computer" call to action
- What is OKTAI Computer
- What sets it apart: all 6 differentiators, each with its own animated icon
- How it works: the goal-to-result story told through icons and motion
- Closing call to action ("Ready to give it a real task?")

CoPlanet (company section)

- Who is behind OKTAI Computer
- CoPlanet's identity and its relationship to the product
- Offices (Zug HQ and San Francisco)

Across the site

- Navigation, working links and buttons, and an English/German language switcher

- The agreed contact or lead form
 - Legal pages as supplied: Privacy Policy, Terms of Service, Imprint, Data Processing, Data Retention and Cookie notice
 - Responsive layouts for desktop, tablet and mobile
 - Accessibility: readable contrast, keyboard navigation and reduced-motion support
 - Basic SEO for each language: page titles, descriptions and clean URLs
 - Optimised media for fast loading
-

06 Visual and motion assets

Custom OKTAI icon family

- Story icons that follow the product flow, from the command center and the goal to the delivered result
- One icon for each of the 6 differentiators
- Animated on the website where they strengthen the story
- Delivered as SVG and PNG

Logo variations

- Web-ready variations built on your existing logo (full logo, mark only, light and dark)
- No changes to the original logo without your approval

Motion and videos

- All the motion the website needs to tell the OKTAI and CoPlanet story: the intro, scroll-driven storytelling, section transitions and animated icons
- Motion videos for the website, delivered as optimised MP4 files, in English and German where they contain text
- The exact list of motion pieces is set in the storyboard stage (days 1 to 3) and approved by you before production
- Every motion piece and video gets 2 revision rounds

07 Schedule (2 weeks)

Days 1 to 3: Structure and direction

- Kickoff and a short questionnaire on goals and references
- My reading of your references
- Page structure and wireframes in Figma, as a clickable prototype (your approval)
- Storyboards for the motion and videos (your approval)

Days 4 to 9: Design, build and motion

- Visual design built directly in code and reviewed on a live preview link that updates as I work
- Icon family and logo variations
- Motion and videos produced, then revised with you

Days 10 to 14: Languages, testing and handover

- German version, language switcher and CMS setup
- Testing across major browsers and screen sizes
- Fixes, handover, editing guide and a final walkthrough

Assumptions

- Feedback within 1 working day at each approval stage
- Content is final before day 10
- If the review rounds need more time than planned, we agree on a short extension together

08 Price

Total: USD 10,000 (fixed)

PART	PRICE (USD)
Discovery, reference interpretation, structure and Figma prototype	900

PART	PRICE (USD)
Visual design (desktop, tablet and mobile)	1,900
Custom icon family and logo variations	1,300
Motion and videos	2,600
Development (React and Astro, CMS, English and German, SEO, accessibility, performance)	2,700
Testing, handover, editing guide and 30 days of support	600
Total	10,000

- Changes outside the agreed scope are quoted in writing and approved by you before any work starts.

09 How we will work together

- **Approval gates:** structure and storyboards, then design and assets, then the full build, then final testing. Nothing moves to the next stage without your approval.
- **Staying in touch:** we connect on LinkedIn or WhatsApp whenever needed, for quick questions and decisions. Payments stay on Contra.
- **Daily progress:** updates, feedback and bugs tracked in your preferred tool (for example Jira, Trello or Notion).
- **Where you review:**
 - The structure as a Figma prototype
 - The website on a live preview link
 - Motion and videos as MP4 drafts
- **Content revisions:** content is final before day 10. Later changes are welcome, and anything beyond small text edits is agreed as out of scope first.

- **German texts:** I prepare the German version, and your team approves the final wording.
-

10 Handover and support

You receive

- The complete website, tested and ready to publish
- Full source code, transferred to your Git repository
- The Figma structure and prototype file
- Icons and logo variations as SVG and PNG
- All videos as optimised MP4 files
- CMS access, with your team as owners
- A short guide to editing content, managing languages and publishing
- All access and licences transferred or clearly documented

Domain, hosting and maintenance

- A technical partner I work with handles the domain connection, the hosting setup and ongoing maintenance if you want this. It can also stay with your team.

Support

- 30 days of bug-fix support after launch
-

11 Next step

I would be glad to start by agreeing on the reference direction and page structure. We can connect on LinkedIn or WhatsApp, whichever you prefer.

Best regards, Sabin Mainali
